Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1 and 21-35, drawn to methods for scanning nucleic acid arrays, classified in class 435, subclass 6.
- II. Claims 2-20, drawn to a scanning system, classified in class 422, subclass 82.05.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case) the process as claimed can be practiced by another materially different apparatus or by hand. The methods of Invention I can be practiced by dipping microarrays into solutions, transferring solutions using micropipetters and/or capillaries thereby fluidically coupling and/or separating the microarrays relative to the method steps and the microarrays can be scanned using a bench-top scanning microscope.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
